Answers + worked solutions for the 20 practice items.

Q#	Section	Answer
1	Math	C. 112
2	Math	A. 0.146
3	Math	D. 1380 pounds
4	Spatial	B
5	Spatial	C
6	Spatial	B
7	Spatial	A
9	Verbal	C. HELICOPTER is to AIRCRAFT
10	Verbal	D. HONORABLE is to SHAMEFUL
11	Verbal	E. tutelage
12	Verbal	D. flourished
13	Verbal	C. rebuked .. superlative
15	Spatial	D
16	Spatial	B
17	Spatial	D
18	Spatial	E
19	Math	B. 8
20	Math	B. 35
22	Logic	A. True
23	Logic	C. Uncertain
24	Logic	C. Uncertain
25	Verbal	E. 5
26	Verbal	B. 2
28	Spatial	B
29	Spatial	B
30	Spatial	C
31	Math	A. 81
32	Math	D. 175
33	Math	A. 30

34	Verbal	E. measure ... limitations
35	Verbal	C. immaculate
36	Math	C. 10%
37	Math	E. 20
39	Math	A. 0.25%
40	Verbal	C. germane
41	Verbal	D. proven
42	Verbal	A. GULLIBLE is to MISLEAD
44	Verbal	E. supercilious .. insolence
46	Math	B. 60%
47	Math	B. 84
49	Math	C. 42.9%
50	Math	B. 1040

Detailed Solutions

Q1 (Math) — Answer: C. 112

16 mowers/hour x 7 hours = 112 mowers.

Q2 (Math) — Answer: A. 0.146

Compare magnitudes: $0.146 < 0.45 < 1.09 < 2.001 < 2.0102$. So 0.146 is the smallest.

Q3 (Math) — Answer: D. 1380 pounds

Increase = $1200 \times 0.15 = 180$. Second month = $1200 + 180 = 1380$ pounds.

Q4 (Spatial) — Answer: B

The pattern alternates filled hourglass / filled bowtie. After the 4th element (filled bowtie), the next must be a filled hourglass = B.

Q5 (Spatial) — Answer: C

The figure is rotating 90 degrees clockwise from box to box while the fill pattern of the small squares stays consistent. Choice C continues that rotation.

Q6 (Spatial) — Answer: B

The top row alternates curved-edged shapes (oval, circle) with straight-edged shapes (square, parallelogram). Position 5 should therefore be a curved shape; the only curved option is B (oval).

Q7 (Spatial) — Answer: A

The shaded wedge rotates a consistent fraction (one wedge clockwise) per step. Continuing that rotation places the shaded wedge in the position shown by choice A.

Q9 (Verbal) — Answer: C. HELICOPTER is to AIRCRAFT

CANOE is a TYPE OF boat. The same 'is a type of' relationship holds for HELICOPTER (a type of AIRCRAFT). The other pairs are part-of, location, or component relationships.

Q10 (Verbal) — Answer: D. HONORABLE is to SHAMEFUL

OCCUPIED and VACANT are antonyms. The same antonym relationship is between HONORABLE and SHAMEFUL. The other pairs are synonyms or category relationships.

Q11 (Verbal) — Answer: E. tutelage

'Tutelage' means instruction / guidance from a teacher or mentor. Pilferage = petty theft; suffrage = right to vote; shortage = lack of; umbrage = offense. Only 'tutelage' fits the mentoring context.

Q12 (Verbal) — Answer: D. flourished

The clue 'Even though' signals contrast: the team's performance was good but the manager was still fired. 'Flourished' (thrived) is the only positive option.

Q13 (Verbal) — Answer: C. rebuked .. superlative

The father reacts negatively to poor grades, so blank 1 must be a scolding verb (rebuked / berated / chastised). The CONTRAST clue means blank 2 must mean 'excellent' (opposite of poor). 'Superlative' = of the highest quality, so 'rebuked .. superlative' is the only consistent pair. Lackluster and mediocre fail the contrast test.

Q15 (Spatial) — Answer: D

Every figure has a single diamond inside an outer container. Only D adds a second nested shape (a circle around the diamond), so D does not belong.

Q16 (Spatial) — Answer: B

In four figures the outer shape is a triangle. Only B has the outer shape as a circle, making it the odd one out.

Q17 (Spatial) — Answer: D

All other figures have a closed, symmetric outer shape (circle, rounded square, square). D's outer shape is an asymmetric trapezoid, so it does not belong.

Q18 (Spatial) — Answer: E

In A, B, C, and D the bottom row is the exact reverse (mirror) of the top row. In E the bottom row is not the mirror of the top, so E breaks the rule and does not belong.

Q19 (Math) — Answer: B. 8

Discount price = $\$10 \times (1 - 0.20) = \8 . Number bought = $\$64 / \$8 = 8$ appetizers.

Q20 (Math) — Answer: B. 35

$7 = 0.20 \times N$, so $N = 7 / 0.20 = 35$.

Q22 (Logic) — Answer: A. True

Classic syllogism (modus ponens). Premise 1: Jeff works in the store. Premise 2: All store employees wear uniforms. Therefore Jeff wears a uniform. Conclusion is necessarily TRUE.

Q23 (Logic) — Answer: C. Uncertain

The premises only state that A knows D and D knows S. They do not say anything about whether Abby knows Sonny directly. The conclusion could be true or false, so it is Uncertain.

Q24 (Logic) — Answer: C. Uncertain

This is the converse error (affirming the consequent). All orchestra members attended, but non-members can also attend. Lisa might be in the audience without being in the orchestra. Uncertain.

Q25 (Verbal) — Answer: E. 5

On the screenshot every left-column entry matches its right-column counterpart character-for-character (no spelling, spacing, or punctuation differences detected). All 5 are identical, so the answer is 5.

Q26 (Verbal) — Answer: B. 2

Compare row by row: 1 differs (Middleton vs Middletown), 2 differs (Corp. vs Co.), 3 matches, 4 matches, 5 differs (Simpson vs Stimpson). Two rows match exactly.

Q28 (Spatial) — Answer: B

The middle column is circles, increasing from 1 to 2, so the missing cell needs 3 circles. Looking across each row, row 2 uses filled shapes (filled circles in the middle). The third row keeps the same fill convention as the bottom row of the other columns (filled). B (3 filled circles) completes both column count and fill convention.

Q29 (Spatial) — Answer: B

Each row contains three shapes that share a common attribute (e.g. triangular silhouette in row 1). The missing top-middle cell needs a triangular/peaked shape; the only matching candidate is B (the pentagon / 'house' shape with a triangular peak).

Q30 (Spatial) — Answer: C

Column 2 cycles through the same four symbols (triangle, diamond, star, plus) in different positions. The missing middle cell of column 2 must contain those four symbols rearranged. Choice C is the option that shows triangle, diamond, star, plus arranged consistently with the row and column rotation pattern.

Q31 (Math) — Answer: A. 81

Each term is the previous term x 3: 1 -> 3 -> 9 -> 27 -> 81. So the next term is 81.

Q32 (Math) — Answer: D. 175

$1.25 \text{ MB} \times 140 = 175 \text{ MB per month.}$

Q33 (Math) — Answer: A. 30

Electrician: $56 / 3.5 = 16$ repairs. Colleague: $56 / 4.0 = 14$ repairs. Total = $16 + 14 = 30$ repairs.

Q34 (Verbal) — Answer: E. measure ... limitations

The closing clue 'when sales began to suffer' tells us the strategy had downsides. The blank must be a negative noun. 'Limitations' fits, and 'measure ... limitations' is internally consistent.

Q35 (Verbal) — Answer: C. immaculate

'Immaculate' = perfectly clean/spotless, the natural opposite of 'a mess'. Intrepid = brave; precise = exact; unkempt = messy (wrong direction); dexterous = skilled with hands.

Q36 (Math) — Answer: C. 10%

In 1962 Maris hit 33 and Mantle hit 30. Difference = 3. Percentage more (vs Mantle) = $3 / 30 = 0.10 = 10\%$.

Q37 (Math) — Answer: E. 20

Sum of all four = $4 \times 13 = 52$. Sum of the given three = $10 + 17 + 5 = 32$. Fourth number = $52 - 32 = 20$.

Q39 (Math) — Answer: A. 0.25%

Independent events: $P(\text{both}) = 0.05 \times 0.05 = 0.0025 = 0.25\%$.

Q40 (Verbal) — Answer: C. germane

'Germane' = relevant, on-topic, pertinent. It is the direct opposite of 'irrelevant'. 'Extraneous' is a synonym (not opposite). The other choices are unrelated.

Q41 (Verbal) — Answer: D. proven

'Rumored' means alleged / unverified. The opposite is 'proven' (established as fact). 'Supposed' and 'doubtful' are near-synonyms of rumored, not opposites.

Q42 (Verbal) — Answer: A. GULLIBLE is to MISLEAD

FALLIBLE means prone to / capable of MISTAKE. The same '-ible' adjective + associated action relationship holds for GULLIBLE (prone to be MISLEAD). The other pairs do not have an internally consistent 'liable to X' relationship.

Q44 (Verbal) — Answer: E. supercilious .. insolence

Both blanks must be negative because the manager declined the candidate. Supercilious (haughty/arrogant) and insolence (rude disrespect) are both negative and consistent with poor treatment of staff. Other pairs mix positive and negative or do not fit ('chivalry' is positive).

Q46 (Math) — Answer: B. 60%

Team A remaining: $14 - 2 = 12$. Team B remaining: $14 - 6 = 8$. Total remaining: 20. Team A share = $12 / 20 = 0.60 = 60\%$.

Q47 (Math) — Answer: B. 84

Jacob is 20% younger than his 35-year-old sister: $\text{Jacob} = 35 \times 0.80 = 28$. Jacob is one third of his grandmother's age, so grandmother = $28 \times 3 = 84$.

Q49 (Math) — Answer: C. 42.9%

Let original price = \$100. After a 30% drop the stock is worth \$70. To return to \$100 the gain needed is $30 / 70 = 0.4286 = \sim 42.9\%$.

Q50 (Math) — Answer: B. 1040

Sum approx = $600 + 1400 + 1600 + 1100 + 450 = 5150$. Average = $5150 / 5 = 1030$. Closest answer = 1040.
